Defects Log:

Defect No.	Defect Description	Defect Severity	Test Case No. OR Description
1.	Cannot use the username and password created on the register page to login to the app.	1	When the user enters details on the "register" page in order to register as a new user. It says "User created" but does not actually create a new user. We were unable to login with the username and password that we created.
2.	A user can login on multiple devices	3	A user can login on multiple devices at the same time.
3.	The description is not saved	2	When the user tries to edit the profile by entering a short description on the profile page, the changes are not reflected on the profile page after the changes are saved.
4.	The profile picture cannot be changed.	2	When the user tries add a profile picture, the user is able to select a picture but the changes do not reflect on the profile page. The new profile picture does not change.
5.	The logout option takes the user to the registration page.	3	When the user logs out of their account, they are taken to the registration page, instead of the login page.
6	The clickable social media links to Facebook does not take the user to the page with the unique handle.	2	When the user adds a unique handle for the Facebook link, the handle is not saved and the link does not direct the user to the correct page.
7.	Duplicate usernames are accepted.	2	The application accepts multiple users with the same user name when this should not be allowed by the app.
8.	The clickable social media links to Instagram does not take the user to the page with the unique handle.	2	When the user adds a unique handle for the Instagram link, the handle is not saved and the link does not direct the user to the correct page.
9	The clickable social media links to LinkedIn does not take the user to the page with the unique handle.	2	When the user adds a unique handle for the LinkedIn link, the handle is not saved and the link does not direct the user to the correct page.
10.	Connection between two users only shows up on the	1	Two users can connect by having one person go to their "Connect" tab at the bottom and

	list of the user who scanned the code.		scanning the other's QR code. However, even though the two users are connected, the connection only shows up on the event list of the user who scanned the code.
11.	Users are able to connect with themselves.	1	When a user tries to connect to himself using a different phone a prompt says the users are connected whereas it should say "Cannot add yourself".
12.	Display of the user's connections on the wrong page/tab.	1	The connected users must show up in each other's networks but they show up in each other's event list.
13.	New event is added to networks	2	When a new event is created and added it is listed in networks and not in events.
14.	Scanning QR's unknown to the app does not cause a pop up.	2	Scanning other QR codes that are not part of the app should cause pop ups such as "Stranger does not exist". The QR is not scanned and no such error shows up.
15.	In the networks list, only the Instagram link is not listed.	2	When the user navigates to the networks list and clicks on a user profile, the handle/unique link to Instagram is missing.
16.	Deleting one moderator deletes all moderators.	1	When multiple moderators are listed, and one moderator is deleted. It deletes all the moderators for the event.
17.	Multiple occurrences of same participant.	1	A user can be added multiple times as a participant to the event.
18.	User is still able to add participants after being removed as a moderator.	1	After removing the user as a moderator from the admin page, that particular user still has privilege to add participants to the event.
19.	Able to create event of the same name.	2	Admin is able to create event of the same name without any warning or error.
20.	Unable to have event in the list if user is added as moderator before scanning to add event.	1	When a user is added as a moderator to an event before the event is added by the user to his event list, it says that the event has already been added.
21.	Unable to see changes to delete an event immediately.	1	Unable to see delete an event update on the web application. User is simply redirected to the first event in the list.
22.	Unable to logout of web application.	1	Unable to log out of the web application.
23.	Editing event does not work	1	Editing an event creates a new event in the list.
24.	The creator of the event can be added as a moderator	2	Only existing users who are not the creators of the event can be moderators. However, the app lets the creator be a moderator.
25.	Able to add participant even when not a moderator for an event.	1	User able to add a participant for an event even though the user is not a moderator.
